Summary

The legal and non-legal application prohibitions/limitations for certain substances described in this Factory Standard are to protect the environment and human health during their use and disposal. These limitations apply to materials/components, accessories and finished products.

Observing the Miele Factory Standard does not release from the responsibility to abide by applicable laws and guidelines.

1 Purpose

This Factory Standard describes the legal and non-legal application prohibitions/limitations for certain substances in materials/components, accessories and finished products. It is absolutely essential for suppliers to Miele/Imperial to fully comply with the application prohibitions/limitations taking into consideration the obligation to provide information in accordance with Point 5. Non-compliance with these requirements endangers the validity and acceptance of the conformity declarations given by Miele/Imperial to national, European or international monitoring authorities. For materials/components, accessories and final products which come into contact with foodstuffs or are covered by the drinking water ordinance, compliance must be confirmed independently from this Miele Factory Standard (MWN), in accordance with the requirements of the Miele/Imperial functions.

2 Valid for

This Factory Standard applies to Miele/Imperial and suppliers.

de available on the market

PAK-Leitfaden DKE/DIN/VDE
EK 1 374-08 Rev. 2

Permitted maximum levels for polycyclic aromatic hydrocarbons (PAH) in electrical machines

ZEK 01.4-08

Testing and evaluation of polycyclic aromatic hydrocarbons (PAH) with GS mark approval

All national requirements, for example permitted maximum levels for PAH, for which no official English translation is available are to be obtained from the source applicable to the supplier in such cases in the appropriate language.

4 Application limitations for substances

4.1 Legal application limitations

To protect the environment and health of persons involved in future waste processing, the following listed substances may only be present in materials/components, accessories and final products supplied to Miele/Imperial in quantities less than the limits given. The given limits refer to the percentage by weight of the homogeneous material (handling in accordance with DIN EN 62321). For fibres, the limit refers to the percentage by weight of the material.

- Lead and its compounds..... Limit 0.1 percent by weight = 1 g/kg
- Cadmium and its compounds Limit 0.01 percent by weight = 0.1 g/kg
- Polybrominated bi-/diphenyls..... Limit 0.1 percent by weight = 1 g/kg
- Polybrominated diphenyl ether Limit 0.1 percent by weight = 1 g/kg
- Mercury and its compounds..... Limit 0.1 percent by weight = 1 g/kg
- Chromium VI and its compounds..... Limit 0.1 percent by weight = 1 g/kg

- Asbestos (all modifications) Limit 0.1 percent by weight = 1 g/kg
- Asbestos substitutes,..... Limit 0.1 percent by weight = 1 g/kg
all types of ceramic-fibre substitutes which are suspected to have carcinogenic potential in accordance with the internationally accepted definition given by the IARC, Lyon (International Agency for Research on Cancer).
<http://monographs.iarc.fr/ENG/Classification/index.php>
- Biopersistent fibres Limit 0.1 percent by weight = 1 g/kg
- Dimethyl fumarate Limit = 0.1 mg/kg
- Polychlorinated bi-/diphenyls (PCB)..... Limit = 50 mg/kg

4.2 Further application prohibitions/limitations regulated by Miele/Imperial:

To protect the health of persons during use or operation of finished products, the following listed substances may not be used or may only be present in materials/components, accessories and final products supplied to Miele/Imperial in quantities less than the limits given. The given limits refer to the percentage by weight of the homogeneous material (handling in accordance with DIN EN 62321).

The substances listed at Point 4.2 may only be used when the normal substitutes are technically unsuitable or economically unacceptable. These substances must be named and specially approved by Miele/Imperial with regard to the further development of legal prohibitions/application limitations. The requirements listed in the application prohibitions at 4.2.1 and application limitations at 4.2.2 refer only to substances knowingly added. In this regard, the entire supply chain is to be taken into consideration.

Beyond the legal requirements, use of the "candidate substances" (REACH) is to be avoided. If it is not possible to avoid these substances, then they must be named and specially approved by Miele/Imperial with regard to the potential development of legal prohibitions/application limitations.

4.2.1 Application prohibitions

- Azo dyes..... Those that, due to the cracking of one or more azo-group amines and then via further chemical reactions, could produce nitrosamine
- Chloroparaffin..... and its compounds
- Dioctyltin..... including all modifications
- Dibutyltin..... including all modifications
- Nitrosamines..... or substances that react to produce nitrosamines
- Red phosphorous If it has not been specially chemically bound or treated with a hydrolysis-stable coating or been further processed

4.2.2 Application limitations

- Beryllium and its compounds..... Limit 0.1 percent by weight = 1 g/kg
- Tetrabrombisphenol A additive Limit 0.1 percent by weight = 1 g/kg
(TBBP A additive) Limit applicable to freely available monomers
- Bisphenol A (BP A)..... Materials that are approved for contact with foodstuffs.
Limit in accordance with legal regulations, however maximum 0.1 percent by weight = 1 g/kg
Limit applicable to freely available monomers
- Hexabromocyclododecane (HBCDD) Limit 0.1 percent by weight = 1 g/kg
- Polycyclic

Important: For materials/components expected to come into contact with food-
